Compass

The compass is the built-in navigation tools in c:geo. You can start the compass from the cache detail page for the cache coordinates itself or for any waypoints of a cache.

Top Bar Menu

The top section of the compass contains additional functions either shown as an icon in the top bar or hidden behind the so called overflow menu button (three-dot button). All available functions are described below.

The icons shown in the top bar and the contens behind the overflow menu button are distributed dynamically based on your device resolution and screen orientation. Thus it might be possible, that more or less items can be found behind the menu button or instead shown as icons in the top bar on your device.
In case a menu entry is shown as an icon you can long press the icon to get a popup showing its function.

Fix Me! **PICTURE OF EXPANDED MENU ITEMS**

Icon	Function	Description
	Hint	This will show a small popup window on the compass showing the cache hint (if provided by the owner)
	Show on map	Will open the target coordinates on the map.
	Overflow menu button	Clicking here will open the menu of functions not fitting into the top bar on your device, thus being displayed as a list instead. The function shown in this list are also described in this table.
	Start talking	Will start the text-to-speech output of direction and distance towards the target. You can also switch off the display once talking function has been started.
	Log Visit	Open the logging screen for cache.
	Select Destination	Allows you to switch the compass target between the available waypoints of the cache.
