**History** ..... 2

# History

The history list does mainly look like a normal [list](#) but is filtered to caches where you recently composed an online or offline log. In contrast to normal lists of stored cache it might also contain cache no longer stored on your device.

The history list is a good starting point for reaccessing your pending offline logs and either sending them online or exporting [field notes](#) of your offline logs.

Please note, that this is a local list in c:geo and not synchronized with the recently viewed caches list on the geocaching website.
