Utility programs

This function will open a screen showing apps, which might either work in conjunction with c:geo or can be used to enhance some features in c:geo. You can tap on each tool to open a web page with more information and/or download possibility.

Logo	Name	Description
	Send to c:geo	Send to c:geo is a browser extension for your PC. When browsing geocaching.com , you can send caches to your smartphone with the tap of a button directly inside your browser.
	c:geo contacts plugin	Enables you to open a contact card (of your address book) directly from a log entry , so you can more easily ask friends for help.
	Brouter Offline Navigation	BRouter provides offline routing. If it is installed and has the necessary files downloaded, c:geo will automatically show a route to the cache on the normal internal map . A short guide of how brouter works together with c:geo can be found here .
	Pocket Query Creator	Allows easy creation (and download) of Pocket Queries centered on your current position or a point selected from a map. Requires a geocaching.com premium membership.
	Google Translator	If you download translation packages in the Google Translator app, then you can easily translate cache descriptions and log entries in c:geo by a long tap on the text (even without an internet connection).
	WhereYouGo	WhereYouGo allows playing and searching geocaches of the type Wherigo . c:geo can automatically trigger the download of cartridges within this app.
	GPS Status & Toolbox	You can use the radar in this application in conjunction with c:geo. It also offers a lot of other GPS-related information.

Logo	Name	Description
	<p>Bluetooth GPS</p>	<p>Allows to use an external GPS receiver to get more precise location data, and you can spare battery of your device.</p> <p> Please note, that you have to disable the usage of Google Play Services in c:geo settings to use a Bluetooth GPS.</p>
	<p>GPS Locker</p>	<p>GPS Locker keeps GPS signal active when switching between applications and when your device's screen is off.</p>
	<p>Barcode Scanner</p>	<p>There are Greasemonkey scripts and websites which enable display of geo codes as bar codes. With this app, c:geo can read such geocodes directly from the screen of your computer.</p>
	<p>Locus</p>	<p>Outdoor navigation app for your phone or tablet. View topographic maps offline, track your route, hunt geocaches, use a voice guide and do even more.</p>
