Map Sources

The following map types are available in c:geo. You can change between the map types in the settings or in the menu of the map.

| Name | Description |
|------------------|--|
| Google:Map | An online street map provided by Google. |
| Google:Satellite | An online satellite view map provided by Google. |
| OSM:Mapnik | An online street map provided by OpenStreetMap. |
| | Offline maps rendered from map files in Mapsforge format. Instead of OSM:Offline the names of the available map file will be shown in the selection menu. |

Currently c:geo does only support Google maps v1, which are not supporting rotation of the maps. Thus all maps are always displayed northbound. We are however working on implementing a newer Google maps version.
