# Trackable handling

## Supported trackables

c:geo supports various types of trackable items provided by different platforms:

Icon	Type	Description	Functions
	Travel Bug	Trackable items of <a href="https://geocaching.com">geocaching.com</a>	Full support of all trackable functions
	GeoKrety	Trackable items of <a href="https://geokrety.org">geokrety.org</a>	Full support of all trackable functions
	GeoLutin	Trackable items of <a href="https://geolutins.com">geolutins.com</a>	Search trackable and show trackable information only.

## Searching for a trackable

Most trackable items have two different lookup codes, which can be used to identify and search for the trackable:

- Public trackable code:**  
The non-secret trackable code (e.g. TBxxxx, GKxxxx, GLxxxx). This code can be used to search for the trackable and show its details, but cannot be used for logging the trackable.

You can use the public tracking code to search for a trackable using either the [search function](#) or the [quick search bar](#).

The search will show you the [trackable details](#) of the trackable, from where you can start logging the trackable (if you also know the secret tracking code of it).

- Secret tracking code:**  
A non-public tracking code typically only printed on the trackable item. This code is needed to post a log for a trackable item, to ensure that you have physically seen/moved this trackable.

The secret tracking code will be required while composing your trackable log. For geocaching.com trackables you can also use the secret code in the [search function](#). This will not work for other trackable brands than Travel Bugs as c:geo can not distinguish the trackable brand by its secret code and therefore assumes geocaching.com as default.

The [quick search bar](#) can also be used to search a trackable by its secret code unless it coincidentally starts with an identifier reserved for geocaches (e.g. GCxxxx, OCxxxx, OUxxxx), in which case c:geo cannot distinguish if you search for a secret code of a trackable or a geocache. In such cases you have to use the [search function](#) instead.

The search will show you the [trackable details](#) of the trackable, from where you can start logging the trackable.

## Logging a trackable

From the trackable details view you can start logging the trackable, which will open this logging screen:

### Top Bar Menu

The icons shown in the top bar and the contents behind the overflow menu button are distributed dynamically based on your device resolution and screen orientation. Thus it might be possible, that more or less items can be found behind the menu button or instead shown as icons in the top bar on your device.

In case a menu entry is shown as an icon you can long press the icon to get a popup showing its function.

Icon	Function	Description
	Send log	Use this button to send your log online after you finished composing it.

Icon	Function	Description
	Add a template	This allows you to either add a <a href="#">template</a> or your signature to the log.
	Menu overflow button	Clicking here will open the menu of functions not fitting into the top bar on your device, thus being displayed as a list instead. The function shown in this list are also described in this table.
	Smilies	Opens a list of smiley tags you can insert into your log.
	Repeat last log	This function will insert the log text of the last trackable you logged into the log text field.

Log type

Depending on the trackable brand, its current state and if you are owner of the trackable, different log types can be selected by clicking on this field:

Log Type	Description
Retrieved	You retrieved this trackable from the geocache, where it is currently listed.
Discovered	You only want to report, that you have seen this trackable but did not perform any other action with it.
Dropped Off	<div><div></div><div>This log type is only available for GeoKrety, as geocaching.com dropped off logs are always combined with a cache log and therefore included on the <a href="#">geocache logging page</a>.</div></div>
Visited	<div><div></div><div>This log type is only available for GeoKrety, as geocaching.com visited logs are always combined with a cache log and therefore included on the <a href="#">geocache logging page</a>.</div></div>
Grabbed somewhere	You want to transfer this trackable into your inventory but did not find it in a cache but grabbed it from another user or an unknown location.
Note	You want to write a comment/note for this trackable.
Move to Collection	If a geocaching.com trackable is marked as collectible, you can use this log type to move the trackable from your inventory to your personal trackable collection.
Move to Inventory	If a geocaching.com trackable is currently in your collection, you can use this log type to move the trackable to your inventory.

Log date/time

Select the date (and time - only supported for GeoKrety) associated with your log.

## Tracking code

A dark rectangular input field with a light gray border and the text "Tracking Code" inside.

Enter the secret tracking code into this field before posting your log. You will need the secret code to post any log besides Note. GeoKrety also requires the secret code to post a Note.

The secret code will be already shown in this field if you used it to search for this trackable or if this trackable is currently in your inventory.

## Log text

A dark rectangular input field with an orange border. The text "Log Text" is in orange at the top left. The main text inside is "This is my personal log text for this trackable."

Enter your individual log into this field.

## Social media

A dark rectangular button with a white checkbox and the text "Post this find to Twitter".

If you connected c:geo with [Twitter](#) in the [settings](#) this field will be shown. If you enable the checkbox c:geo will post a tweet in parallel to sending this log.

## Special fields

Two dark rectangular input fields side-by-side. The first is labeled "Geo code" and the second is labeled "Coordinates".

In case you compose a Dropped Off log for a GeoKrety trackable, you will need to define the geo code and/or the coordinates of the cache, where you dropped this trackable.

Use the field Geo code to enter the geo code of the cache where your dropped the trackable or click on Coordinates to open the [coordinate input dialog](#) and enter the coordinates, where you dropped off the trackable.

## Trackable Inventory

The trackable inventory is the list of all trackables you currently have in your hands (i.e. you retrieved them from a cache or grabbed them from another user).

At the moment c:geo does not support a dedicated view of your trackable inventory. However you will see you complete inventory on the [inventory section](#) of the [cache logging page](#), while composing a log for a geocache.
